Stereo Vision using the OpenCV library
A glance

Sebastian Dröppelmann
Moos Hueting
Sander Latour
Martijn van der Veen

University of Amsterdam

June 2010

Goal

Goal

Generating a disparity depth map of the environment using stereo vision.

Intended end-result

Figure: Stereo images with disparity depth map

Encountered Problems

- good planning

BUT

- in depth understanding of papers
- lots of converting steps

Calibration

- Retrieve distortion
- Retrieve spatial relation between cameras

Calibration
Demo

Epipolar Geometry

Figure: Epipolar geometry. Point X_L in the left image has to lie on the epipolar line in the right image

Rectification

Stereo vision

Dröppelmann,
Hueting,
Latour,
Van der Veen

Recap

Demonstration

Applications

Vragen

- Calculate rectification parameters
- Reusable

Rectification

Demo

Stereo Matching - A general overview

A	B	C
D	E	F
G	H	I

$\Rightarrow$
- Mapping of pixels
- Disparity $\rightarrow$ Depth
- Occlusion

Stereo Matching - Depthmap

Closest
Nearby
Far
Very Far
Invalid
Stereo Algorithms - Graph Cut
Stereo vision

Hueting,
Latour,
Van der Veen

Recap

Demonstration

Applications

Vragen

- popular
- slow
- smooth
- interlinear consistency

# Stereo Algorithms - Block Matching

- fast
- lots of noise
Stereo Algorithms - Semi Global Block Matching

- not in Python
- good in speed/quality
- good depthmap
- noise

Demo

Stereo vision

Dröppelmann,
Hueting,
Latour,
Van der Veen

Recap

Demonstration

Applications

Vragen

- 3D mapping of a 2D image
- Live Depthmap
- Background Removal
